KUANG-JAO OIL FIELD

In a search of the Shuantung area the Kuang-Jao Oil Field was observed just south of the Huang Ho (Yellow River) and north of Hsin-chen, China at the approximate geographic coordinates of 37 30N - 118 30 E. An estimation of the potential size and limits of the oil field cannot be based on photography alone. Step out rigs can be observed trying to define the limits of the field. There are approximately eight drilling locations, eleven possible producing locations and four areas that contain four to eight gathering tanks each.

Gathering lines have been laid and others are under construction. A search was made for evidence of an existing petroleum refinery or one under construction. No facility of this nature was observed. Figure 1 shows the approximate areal extent of the oil field. Figures 2 and 3 show selected locations within the oil field.
